Hussam Sidani
Regional Manager, Gulf
Symantec

Hussam joined Symantec in 2011, and is currently the regional manager for the Gulf. In this role, he is responsible for growing Symantec’s business in this region and effectively increasing the company’s market share. He has more than a decade of experience in the networking, telecommunication and security industry.

Prior to joining Symantec, he supported companies including Avaya, 3Com and NCR within the sales and channel across the Middle East region.

Session Abstract

Title: Cyber Threat Landscape in the Middle East

This session will address the following:

The Symantec Internet Security & Threat Response (ISTR) report is in its 21st revision this year. Based on the incredible amount of data sources Symantec gathers, our Global Intelligence Network (GIN) is considered one of the largest and richest sources of threat data in the cyber security industry.

During this session, we share the latest statistics of threats witnessed recently around the world and specifically in the Middle-East, followed by a breakdown of what organizations should do to protect themselves. We identify and build a prioritized framework of security controls that is specific for the Middle-Eastern cyber market, prioritizing what each industry should focus on (Government, Financial, Oil & Gas, and Retail).
